7.0. PROCESS DETAILS:

7.1. DESCRIPTION OF THE PROCESS

Core Principles for End-of-Life Care

I. PAIN and PALLIATIVE CARE:

- Physician Orders for Life Sustaining Treatment
- Comprehensive approach to end-of-life planning.
- Gives seriously ill patients and their families more control over their end-of-life care.
- Legal document (actionable medical order) that must be signed by both the physician and patient. May also be signed by nurse practitioners and physician assistants within their scope of practice.
- Prevents unwanted or ineffective treatments.
- Reduces patient and family suffering.
- Pain is one of the most prevalent symptoms near the end of life the adequate management of pain at the end of life is imperative.

- opioid analgesics are the standard of care for treating moderate to severe pain in patients with advanced illness, the false fear that opioids induce respiratory depression and hasten death is a major barrier to their use at the end of life.

- clinicians who care for the chronically ill and for those at the end of life should acquire competency in pain management.

II. AUTOPSY AND ORGAN DONATION (OUTSOURCED)

Autopsy:

- a. Autopsies are **not conducted at Inodaya Hospital.**
- b. Families requiring autopsy must be guided to **authorized government or forensic centers.**
- c. Staff should provide **information and support** for legal and procedural requirements.

Organ Donation:

- d. Organ donation is **actively encouraged** in line with **Transplantation of Human Organs and Tissues Act.**
- e. Hospital staff provide **counseling and support** to families of potential donors.
- f. Only **certified organ transplant centers** are involved in donation and retrieval.
- g. Staff ensure **informed consent** is obtained and documented.
- h. Hospital promotes awareness among patients, families, and the community regarding the **benefits and process of organ donation.**
- i. Ethical and legal standards are strictly followed during all interactions related to organ donation.

III: Patient values, Religion and cultural preferences:

- If the patient has any cultural or religious beliefs which necessitate alternative procedures to nurses undertaking Last Offices. If this is the case then follow the instructions for the specific religion guidelines.
- If the body of the deceased is likely to leak after death, a body bag will be required.
- If any special requests made before death, e.g. the keeping on of jewellery, clothes to be worn.
- If the eyes have been donated for corneal grafting.

III. Clinical policy of care at the end of life should:

1. Respect the dignity of both patient and caregivers;
2. Be sensitive to and respectful of the patient's and family's wishes;
3. Use the most appropriate measures that are consistent with patient choices
4. Access and manage **psychological, social, and spiritual/religious problems;**
5. Provide access to any therapy which may realistically be expected to improve the patient's quality of life, including alternative or non-traditional treatments;
6. Provide access to palliative care and hospice care;
7. Respect the right to refuse treatment;
8. Respect the physician's professional responsibility to discontinue some treatments when appropriate, with consideration for both patient and family preferences;

9. Promote clinical and evidence-based research on providing care at the end of life.

IV: involving patient and family in aspects of care

- Family members (FMs) play important roles in the care of patients including contribution to decision-making, assisting the health-care team in providing care, improving patient safety and quality of care, assisting in home care, and addressing expectations of patient's family and society at large.
- Building rapport with patients and family caregivers.
- Managing patients' symptoms, distress, and functional status (eg, pain, dyspnea, fatigue, sleep disturbance, mood, nausea, or constipation) to improve quality of life.
- Educating patients about their illness and prognosis.
- If the next of kin attend the ward following the death of the patient, return the patient's personal possessions to them ensuring that the appropriate documentation is completed for patient's property and valuables.

V. Psychological, emotional, spiritual, and cultural concerns of the Family.

- people should be offered support at the time of death that is culturally and spiritually appropriate, immediate, and available shortly afterwards. Bereavement support may not be limited to immediately after death, but may be required on a longer-term basis and, in some cases, may begin before death.
- **A stepped approach to emotional and bereavement support may be appropriate, which could include but is not limited to:-**
 - ✓ information about local support services like ambulance
 - ✓ practical support such as advice on arranging a funeral, information on who to inform of a death, help with contacting other family members and information on what to do with equipment and medication
